

Fire Extinguishers for Sale 2014

All our fire extinguishers are manufactured to AS/NZS 1841.5 2007.

Dry Powder:

Use on most fires

These extinguishers come in different sizes:

| 1 kg | 2.3 kg | 4.5 kg | 9kg

They are often installed near equipment or flammable liquids.

They are fast acting and very effective as general-purpose extinguishers, although they do leave a messy deposit.

CO2 (Carbon Dioxide):

Use Class A, B & E fires

These extinguishers come in different sizes:

| 3.5 kg | 5 kg

These have a 'horn' attached to direct the CO₂.

Carbon dioxide displaces oxygen and smothers fire. It doesn't remove the heat, so fires may re-ignite.

Foam

Use on burning solids or liquids

| 9 ltr

Foam is a water based mixture containing small bubbles of air.

It floats on the surface of burning liquids forming a blanket.

This cuts off the oxygen and smothers the fire.

Fire Blankets

Fire blankets are generally found in kitchens and are ideal for cooking fat fires. They can also be used to wrap around people if their clothes catch on fire.

Signage

Including signage with fire extinguishers can guide users to their correct use.
